Type 65 Dry Gas Filters

The Type 65 Dry Gas Filter efficiently removes rust, pipeline scale and dust from a natural gas stream. The filter is generally offered in a horizontal configuration for better control of settled dust particles when changing out the filter cartridges. Filter cartridges can be fiberglass depth type or pleated for longer operation between change-outs.

How it works: The gas entering the vessel flows into the filter cartridges from outside-to-inside, ensuring that the gas stream encounters the most surface area for the greatest dirt-holding capability. The depth-type filter cartridge is the most economical and does an excellent job of holding solids. The pleated filter cartridge is a good choice for expected high solids-loading and has a very low clean pressure drop.

Options:

- Filter cartridges are available in 0.3, 0.5, 1, and 5 nominal micron ratings for 99.9% particle removal.
- Cartridges for 99.98% particle removal are available.
- Horizontal or vertical design.
- Various vessel support styles.
- Lifting eye(s).
- Quick-opening closure for ease of cartridge change-out.
- If requested by customer, we will manufacture our vessel to accommodate other major brands of equivalent filter cartridges which are designed for the application.
- Other customer requirements.

ASME Code Certified: Winston/Royal Guard is an ASME Section VIII, Division 1 Code certified manufacturing facility with National Board certification. Capabilities include all types of non-destructive testing with a rigidly controlled Quality Control system.
